ENTERPRISE ZONE FISCAL IMPACT PROJECT

Introduction

The Enterprise Zone (EZ) Fiscal Impact Project was conducted in 2003 and 2004 by the Legislative Services Agency (LSA) in cooperation with researchers from the Department of Agricultural Economics at Purdue University, the Indiana Department of Commerce (IDOC), the Urban Enterprise Associations (UEAs), and the Indiana Business Research Center (IBRC). The primary purpose of this project was to construct a comprehensive database on business activity, employment, and wages in Indiana's EZs. This cooperative research effort produced detailed information on the EZs and EZ businesses that previously was unavailable. The database is expected to provide substantial benefits in informing policymakers, state economic development officials, and the UEAs about the businesses located in Indiana's EZs. The work product generated by the project comprises:

- 1) Geographic Information System (GIS) maps of each of the EZs operating in Indiana in 2003.
- 2) A census of businesses located in Indiana's EZs.
- 3) Employment, wage, and industry sector information on businesses located in Indiana's EZs.
- 4) Demographic and socio-economic information describing Indiana's EZs.

Project Background

During the 2003 legislative session, HB 1716 was introduced by Representative Sheila Klinker and Representative Sue Scholer. The bill proposed creating a number of new tax incentives for businesses operating in Indiana's EZs. The new incentives included:

- 1) A property tax exclusion applicable to certain depreciable business personal property located in an EZ.
- 2) A state sales tax credit for sales tax paid on purchases of building materials for EZ projects.
- 3) An additional 1% state sales tax collection allowance for retail merchants located in an EZ.
- 4) A state individual income tax deduction for incremental business income derived from property or business operations located in an EZ, or from labor or services rendered within an EZ.
- 5) A state income tax credit for employee training expenses paid by a business located in a city containing an EZ, provided the employees receiving training reside in the city's EZ.
- 6) A state income tax credit equal to \$1,500 per new employee hired by a business located in an EZ.

LSA could not estimate a fiscal impact on these proposed incentives because necessary information on business activity, employment, and wages paid within Indiana's EZs was not available. The only available data relating to EZ business activity, employment, and wages was derived from annual reports from businesses that had received existing EZ tax incentives from 1995 to 2001. LSA concluded that the existent data could not be utilized to validly estimate the

potential fiscal impact of the proposed incentives since they represented a significant departure from the existing set of EZ tax incentives. Consequently, the new incentive set could potentially give rise to a much different and larger group of incentive recipients than would tend to be reflected in reports of past incentive recipients. LSA also concluded that relevant data on the EZs could not be developed on a valid or reliable basis within the time frame of the 2003 legislative session.

At the conclusion of the 2003 legislative session, the EZ Fiscal Impact Project was commenced by LSA and the research team from Purdue University, with the cooperation and assistance of the IDOC, the IBRC, and the UEAs. The project comprised four phases:

- 1) GIS mapping of EZs.
- 2) Geocoding employer data and constructing the business activity database on the EZs.
- 3) Conducting the EZ business survey.
- 4) Constructing the demographic and socio-economic database on the EZs.

GIS Mapping of Enterprise Zones

The first phase of the EZ Project involved generating a digitized Geographic Information System (GIS) map of each EZ. The GIS maps of the EZs were generated by LSA fiscal analysts and one member of the Purdue research team using physical maps and legal descriptions of the EZs provided by the IDOC. The GIS maps of the EZs identified addresses, streets and roads, jurisdictional boundaries, railroads and waterways, *U.S. Census* geography (census tracts, blockgroups, and blocks), and other geographic information comprising each EZ. The initial maps generated by LSA were distributed to the UEAs for feedback. LSA requested that each UEA review the GIS map and make corrections. With the feedback from the UEAs, necessary corrections were made and the final maps were produced by LSA for the next phase of the project.

Geocoding Employer Data/Enterprise Zone Business Activity Database

The second phase of the project consisted of geocoding employer data from the July-September 2002 *Quarterly Census of Employment and Wages* (formerly known as *ES 202 data*). Geocoding is a process of converting information about a geographic location into a readable computer database. The geocoding process involved matching street addresses within each EZ identified with the GIS map to addresses of employers contained in the *Quarterly Census*. The geocoding process rendered an employer database for each EZ that was operational in 2003. A link is provided below to a map of the geocoding results for LaPorte County and the Michigan City EZ. The blue dots on the countywide map (top right of page) represent matches of LaPorte County addresses to addresses of employers contained in the *Quarterly Census*. The red dots on the EZ map (middle of page) represent matches of addresses and employers in the Michigan City EZ only.

[Click Here to View Geocoded Map](#)

The employer database for each EZ identified the industry sector of each EZ business, the number of persons employed by each EZ business, and the annualized wage payments made by each EZ business. For data analysis purposes, five overarching industry sectors were analyzed: *Agriculture and Mining*; *Construction*; *Manufacturing*; *Service*; and *Trade*. Government and nonprofit entities were excluded from the database.

The *Construction* sector and the *Manufacturing* sector are both 2-digit NAICS industries. The *Agriculture and Mining* sector, the *Service* sector, and the *Trade* sector combine various 2-digit NAICS industries sectors that fit within these groupings. The 2-digit NAICS industries grouped

within industry sectors are listed below:

- 1) Agriculture & Mining
 - a) Agriculture, forestry, fishing and hunting
 - b) Mining
- 2) Construction
 - a) Construction
- 3) Manufacturing
 - a) Manufacturing
- 4) Service
 - a) Utilities
 - b) Transportation and warehousing
 - c) Information
 - d) Finance and insurance
 - e) Real estate and rental and leasing
 - f) Professional, scientific and technical services
 - g) Management of companies and enterprises
 - h) Administrative and support and waste management and remediation services
 - i) Educational services
 - j) Health care and social assistance
 - k) Arts, entertainment and recreation
 - l) Accommodation and food services
 - m) Other services (except public administration)
- 5) Trade
 - a) Wholesale trade
 - b) Retail trade

Enterprise Zone Business Survey

The third phase of the project involved a survey of randomly selected firms from the EZ business census. The survey was intended to develop business activity information (including sales, investment, and property information) that could not be gleaned from the *Quarterly Census of Employment and Wages*. It was also intended to develop some information as to the types of incentives EZ businesses may or may not utilize. The survey instrument was developed by LSA and the Purdue research team, and was tested by the Purdue research team on businesses in the Lafayette EZ. Initially, the survey was conducted via telephone in the Bedford and Lafayette EZs. The telephone survey was conducted by the Purdue research team in the Bedford UEA, and by personnel of the Lafayette UEA in the Lafayette EZ. Due to time constraints and low response rates by the selected businesses in these two EZs, the telephone survey was discontinued. In an attempt to improve business response rates and reduce the time involved in conducting the survey, it was conducted via fax in the remaining EZs. The UEA staffs for the remaining EZs faxed questionnaires to selected businesses after contacting the business by telephone. This process also failed to generate sufficient response rates. In total, survey responses were obtained from only 10 of the 29 EZs operating in 2003. The survey response rates for these EZs ranged from about 15% to 20%, well below an adequate response rate of 50%. As a result, the survey failed to generate information that provides a valid representation of the businesses in the EZs.

Enterprise Zone Demographic and Socio-Economic Database

The fourth phase of the project required the IBRC to utilize the *Census 2000* geography of the EZs identified with the GIS map to construct various demographic and socio-economic measures

describing current conditions within the EZs. The demographic and socio-economic measures were constructed from *Census 2000* response data contained in *Summary File 1* and *Summary File 3*. This database describes the:

- 1) EZ population and household composition.
- 2) EZ housing stock.
- 3) EZ labor force.
- 4) Educational attainment and poverty status of the EZ population.

Available Information

For each EZ, the following information is available on this website:

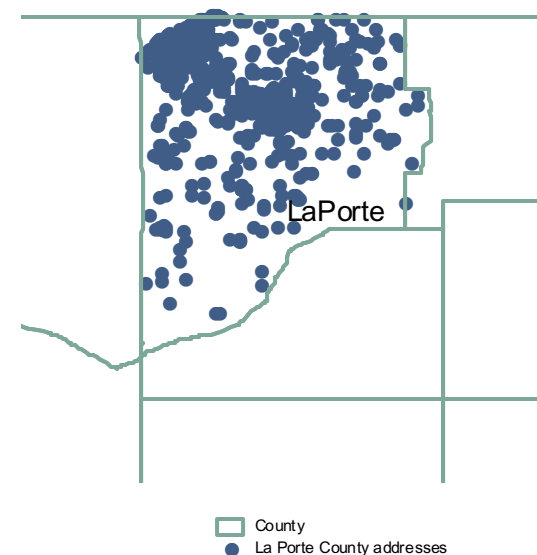

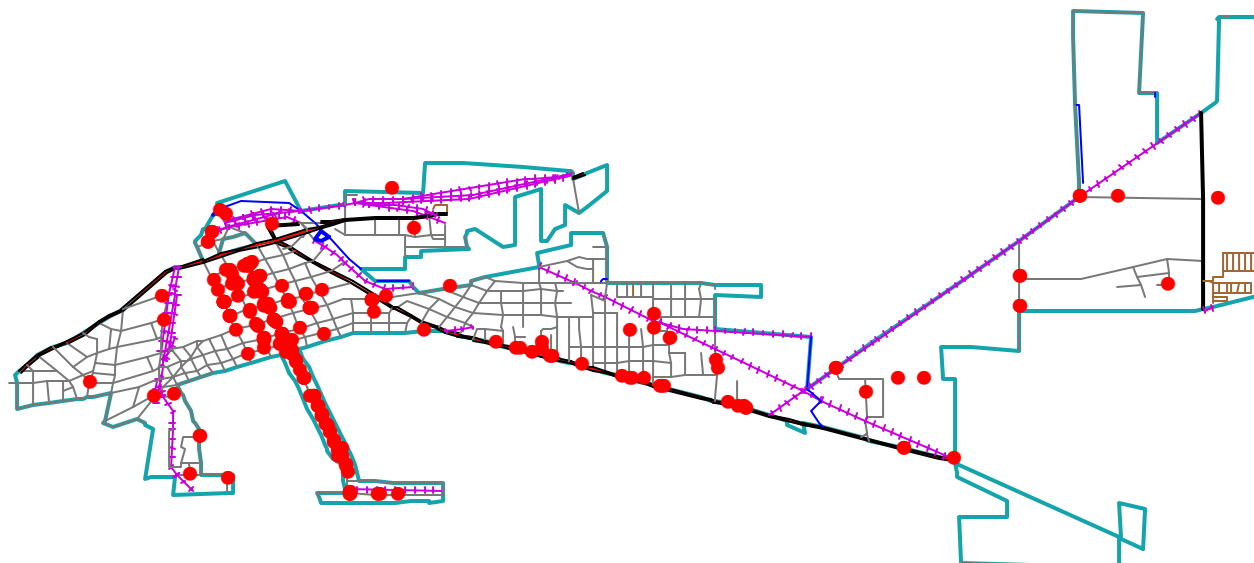

- 1) A GIS Map of the EZ.
- 2) Tables reporting summary statistics on businesses, employment levels, and wage levels in the EZ. The tables are as follows:
 - a) A table reporting the distribution of EZ businesses by industry sector (*Agriculture and Mining, Construction, Manufacturing, Service, and Trade*). This table reports the number (frequency) of business firms in the EZ, and the number and percentage (relative frequency) of EZ business firms by industry sector.
 - b) A table reporting the total employment and distribution of employment by firm for EZ businesses. This table reports total employment by EZ business firms and the firm-level average employment within the EZ. In addition, the firm-level median and first and third quartile measures are reported. The first quartile measure indicates that 25% of EZ firms employ fewer workers than the first quartile number. The median indicates that 50% of the EZ firms employ fewer workers than the median number. And, the third quartile measure indicates that 75% of EZ firms employ fewer workers than the third quartile number.
 - c) A table reporting the total wages, employee average wage, and distribution of firm average wage for EZ businesses. This table reports both the total annual wages paid by EZ business firms and the average annual wage earned by workers at EZ firms. The table also reports the firm-level average wage within the EZ. In addition, the firm-level median and first and third quartile measures are reported. The first quartile measure indicates that 25% of EZ employers pay an average of less than the first quartile amount. The median indicates that 50% of the EZ firms pay an average of less than the median amount. And, the third quartile measure indicates that 75% of EZ firms pay an average of less than the third quartile amount.
- 3) Tables reporting summary statistics on employment levels and wage levels in the EZ by industry sector (*Agriculture and Mining, Construction, Manufacturing, Service, and Trade*). The tables are as follows:
 - a) A table reporting industry sector total employment and distribution of employment by EZ business. This table reports total employment by EZ business firms and the firm-level average employment within the EZ for each industry sector (*Agriculture and Mining, Construction, Manufacturing, Service, and Trade*). In addition, the firm-level median and first and third quartile measures are reported for each industry sector.
 - b) A table reporting industry sector total wages, employee average wage, and

distribution of firm average wage. This table reports both the total annual wages paid by EZ business firms and the average annual wage earned by workers at EZ firms for each industry sector (*Agriculture and Mining, Construction, Manufacturing, Service, and Trade*). The table also reports the firm-level average wage within the EZ, and the firm-level median and first and third quartile measures for each industry sector.

- 4) A table reporting demographic and socio-economic characteristics of the EZs. This table reports *Census 2000* response data relating to EZ population, race and ethnicity, educational attainment, poverty status, household composition, housing stock, and labor force composition and utilization.

Incentives Used by State Enterprise Zone (EZ) Programs

<i>Investment Incentives</i>	<i>Labor/Employee Incentives</i>	<i>Other Benefits</i>
Investment Tax Credit	Job Creation Tax Credit	Zoning exemptions
Business Income Tax deductions	Employee Training Credit	Accelerated zoning decisions
Industrial Recovery Site Credit	Employee Income Tax Credit	Business plan preparation assistance
Tax-free statutes (Renaissance Zones)	Health Insurance Tax Credit	Low-interest loans
Reduced consumer Sales Tax	Employee child care incentives	Discounted use of surplus state property
Sales Tax exemption on utilities		Public school improvements
Lender Income Tax credit for loans to EZ businesses		Public school contribution income tax credit
Property Tax abatements		Child care
Property Tax exemption for machinery and equipment		Upgrading EZ public services (Fire, Police)
Sales Tax exemption for purchase of machinery and equipment		Targeted crime and drug prevention

Selected State Enterprise Zone (EZ) Program Attributes and Incentives						
State	Program Start	Jurisdictions	Zone Duration	# Zones	State Incentives	Local Incentives
Indiana	1983	Municipality or closed military base	10 years, then up to two 5-year renewals	29 ^a	Employee wage credit (=10%, Max. \$1,500) for incremental wages (over pre-EZ designation wages) paid by an EZ business to an EZ resident employee. Investment cost credit (=Max. 30%) for equity investment in start-up or expanding EZ business Loan interest credit (=5%) of interest received on loans made to an EZ business. Employee tax deduction (=Max. \$7,500) for EZ resident who works at an EZ business at least half-time.	Inventory tax credit for property taxes on inventory in the EZ.
Illinois	1982	Municipality or county	30 years	93 ^b	Sales tax exemption (=6.25%) for building materials used in an EZ. Sales tax exemption (=6.25%) for tangible personal property used or consumed in production by a high employment/investment "impact" EZ business. Sales tax exemption (=6.25%) for tangible personal property used or consumed in the operation of pollution control facilities by an EZ business. Utility receipts tax exemption (=5%) for a high employment/investment "impact" EZ business. Investment tax credit (=0.5%) for investment in machinery and equipment, and buildings by an EZ business. Job creation credit (=500) for new jobs created for disadvantaged/dislocated workers by an EZ business. Dividend deduction for dividends paid by an EZ business. Loan interest deduction for interest on loans to an EZ business.	Property tax abatement for new improvements in an EZ. Waiver of business licensing and permit fees of an EZ business.
Iowa	1997	Municipality or county	10 years	17 ^c	Training funds for new employees of an EZ business. Sales, use, and service tax refund (=5%) paid to contractors during construction in an EZ. Investment tax credit (=Max. 10%) for new investment in machinery and equipment, land, buildings, and improvements in an EZ. Research and development tax credit (=Max. 6.5%) for research expenses by an EZ business; based on percentage gross receipts used for research.	Property tax exemption on the value added to property in an EZ.
Kentucky	1982	Municipality or county	20 years	10 ^d	Sales tax exemption (=6%) for building materials, machinery, and equipment in an EZ. Motor vehicle usage tax exemption (=6%) for commercial vehicles used solely for business purposes of an EZ business. Motor vehicle usage tax exemption (=6%) for non-commercial vehicles used solely for business purposes of an EZ business, limited to the first \$20,000 of the retail price of the vehicle. Corporate income tax credit (=10%, Max. \$1,500) for wages paid by an EZ business to employees who have been unemployed for at least 90 days or who have received public assistance benefits.	
Selected State Enterprise Zone (EZ) Program Attributes and Incentives						
State	Program Start	Jurisdictions	Zone Duration	# Zones	State Incentives	Local Incentives
Michigan ^e	1996	Municipality, county, or closed military base	At least 10 years, up to 15 years	20 ^f	Qualified taxpayers in <i>renaissance zones</i> have all state taxes waived, unless delinquent taxes are owed.	Qualified taxpayers in <i>renaissance zones</i> have all local taxes waived, unless delinquent taxes are owed.
Minnesota	1983	Municipality	5 years	5 ^g	Sales tax exemption (=6.5%) for purchase of construction materials or equipment used in an EZ. Income tax credit (=Max. \$3,000) for additional workers employed by an EZ business, other than construction. Income tax credit (% determined at local level) for cost of debt financing to construct or expand facilities in an EZ. Property tax credit paid by state (% determined at local level) for a portion of the property tax on expansion of existing commercial or industrial facility in an EZ.	
Missouri	1985	Municipality or county	15 years initially; eligible for one additional renewal of 7 years.	66 ^h	Investment tax credit for new investment in equipment, land, and buildings in an EZ: 10% of first \$10,000, 5% of next \$90,000, 2% over \$100,000. Job credit (=400) for each new employee hired by an EZ business. Job credit (=400) for each new EZ resident employee hired by an EZ business. In addition to above-described job credit. Job credit (=400) for each new employee hired by an EZ business who has been unemployed for at least 90 days or is eligible for TANF. In addition to the above-described job credits. Training credit (=400) per new employee trained by an EZ business who is an EZ resident or was unemployed for at least 90 days. In addition to the above-described job credits.	Improved real property tax abatement of 50%-100% for a minimum of 10 years but not to extend beyond 25 years after EZ designation.
Ohio	1983	Municipality or county	No limit	344 ⁱ	Exclusion of improvements and tangible personal property of an EZ business from the numerator of property factor under income or corporate franchise tax. Exclusion of compensation paid to new employees by an EZ business from the numerator of the payroll factor under income or corporate franchise tax. Employee training credit (=Max. \$1,000) for cost of employee training provided to a person subsequently employed by an EZ business.	Property tax abatement for up to 10 years on new improvements, machinery and equipment, and inventory in an EZ.

					Daycare services reimbursement credit (=Max. \$300 per dependent) for reimbursement made by an EZ business to employees for daycare services.
					Job creation credit (= \$1,000) for new jobs created by an EZ business for disadvantaged/dislocated workers.
Selected State Enterprise Zone (EZ) Program Attributes and Incentives					
State	Program Start	Jurisdictions	Zone Duration	# Zones	State Incentives
Wisconsin	1987	Municipality or county	7 - 10 years, except that EZ designation expires 90 days after credits in the EZ equal a limit set by the state.	33 ⁱ	Wage credit (=Max. \$8,000) for newly created jobs filled by specified target groups such as dislocated and disadvantaged workers. Wage credit (=Max. \$6,000) for newly created jobs filled by Wisconsin residents who are not members of target groups. Environmental remediation credit (=50%) for costs of: (1) investigating for the presence of pollution; and (2) cleaning up pollution in a brownfield.
